THE SAFETY SHOE

PUTTING THE RECORD STRAIGHT ON SAFETY SHOES

Safety shoes that are intended to protect your feet, could actually be doing them harm. Biomechanical researcher, Terje Haugaa, found that more than 30% of people who wear safety shoes have one or more health-related foot problems. Reason; many safety shoes are designed with a 'banana' shape that forces the foot into an unnatural position.

To tackle the issue, years ago Bata Industrials developed with Terje Haugaa: Walkline®. A biomechanical support system to optimise the wearer's walk and gait. The axis of the shoe, or walk line, matches the foot's longitudinal axis to improve biomechanical function and shock absorption. The outsole has dynamic sections that maximise flexion and torsion when walking to reduce fatigue and create a more energetic walking experience.

We use Walkline® in our famous ACT and PWR ranges. These ranges are best sellers in our collection. At Bata Industrials we constantly strive to improve the performance of our shoes and to make the best professional safety footwear on the market. This is why we decided to update the old derby styles within these ranges with a new design. Together with a new soft, anti-bacterial comfort footbed and an anti-bacterial and odor free lining, these ranges are now ready for the future.

ACT 156 ESD S3

- Microfiber upper/abrasion resistant PU toecap
- FlexGuard® composite penetration resistant insert
- Steel toecap

HDry®

A NEW NAME FOR THE MOST ADVANCED WATERPROOF/ BREATHABLE FOOTWEAR TECHNOLOGY PLATFORM

Without gaps between the impenetrable waterproof membrane and the fabric underneath, water cannot get trapped in-between these layers. Because of this, there is no chance of water leaking through the fabric after long exposures to rain. A very important feature is that breathability is not affected.

PWR 308 S3

- Full grain leather
